

Sustainable City Series

This series is designed to raise the community's awareness of sustainable practices. While the ultimate goal of providing a catalyst to moving Louisville and the region towards a sustainable model for the nation, each forum in the series will focus on different aspects of sustainable practice and will sometimes have different audiences. **FORUM 13:**

SUSTAINABLE UNIVERSITY Tuesday, March 16th, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

The thirteenth forum of the Sustainable City Series hosted by the Urban Design Studio will take a look at the critical role universities play in regional sustainability with a focus on local initiatives by the University of Louisville and its partners as well as what we can learn from initiatives at the University of Kentucky.

Universities play a key role in the promotion and implementation of sustainable practices in our communities. Not only do universities contribute to regional sustainability through fundamental research, but also through education and training, community involvement, and the institutions' own development of space, energy policy and environmental programming. Attendees will learn more about universities and how they are promoting a sustainable city.

GUEST SPEAKERS:

Justin Mog, Assistant to the Provost for Sustainability Initiatives, University of Louisville

Larry Owsley, Vice President of Business Affairs, University of Louisville

Brent Fryrear, Director, Partnership for a Green City

Shane Tedder, Sustainability Coordinator, University of Kentucky

FORUM 12: URBAN PARKS & GREENWAYS Thursday, December 3rd, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

The twelfth forum of the Sustainable City Series held by the Urban Design Studio will focus on urban parks and greenways.

Urban parks and greenways play a vital role in the overall sustainability of a city and region. Parks protect wildlife habitats, provide economic development through place-based economies, cleanse the air, reduce flooding, provide environmental education opportunities, facilitate social gatherings, and offer the possibility for recreation, health, and fitness activities.

Louisville already has an amazing park and greenway system, but that is just the beginning. With the Louisville Loop, Waterfront Park, 21st Century Parks and several other notable initiatives, Louisville is creating one of the most extensive urban park systems in the country. Join us to learn more about the future of our parks and how they are promoting a sustainable city.

GUEST SPEAKERS:

Lisa Hite, AICP, Senior Planner at Louisville Metro Parks

David Karem, President of Waterfront Development Corporation

Dan Jones, Chairman and Chief Executive Officer of 21st Century Parks

Major Waltman, Project Director of Louisville Olmsted Parks Conservancy

FORUM 11: 2009 Louisville Solar Tour Saturday, October 3rd, 10:00 am
Green Building, 732 East Market St, Louisville, KY

This event is part of the National Solar Tour organized by the American Solar Energy Society (ASES). The Sustainable City Series has partnered with the Louisville Solar Tour to provide attendees the opportunity to learn more about solar power and what others in their community are doing to harness the power of the sun. There will be a variety of short speaker presentations as well as opportunities to speak with local leaders in solar energy. Along with solar energy exhibits and the morning presentations there will be an opportunity to take a self-guided tour, provided by the Louisville Solar Tour, of local sites utilizing solar power.

GUEST SPEAKERS: Claude Stephens, Generation 14 on "Insights and Observations About Solar Energy"
Gary Watrous, AIA, Watrous Associates on "Super-Insulated Passive-Solar Design"
Jeremy Coxon, SunWind Power Systems on "Photovoltaic & Solar Water Heating Applications"
Tom Fitzgerald, Kentucky Resources Council on "How Solar Energy Policies Affect the General Public"

FORUM 10: URBAN GARDENS Tuesday, July 7th, 6:00 pm
Glassworks, 815 West Market, Louisville, KY

The growing demand for locally grown foods has been accompanied by an ever increasing interest in the development of community and private gardens. There are many different types of community gardens out there and many more plans and hopes for the future, however there are some things that all these gardens have in common... the environment. The importance of taking the proper steps early on is critical, because even though your food may be grown locally, if you don't know what is in the soil you are using, the food you produce is not necessarily any better than those shipped from thousands of miles away, and perhaps even worse.

GUEST SPEAKERS:

Ann Carroll - EPA Office of Brownfields and Land Revitalization

Wayne Long - Jefferson County Agriculture Agent and Office Coordinator

Sarah Fritschner - Board President of Breaking New Grounds

Michael O'Leary - Clifton Community Garden at Sacred Heart Village

FORUM 9: TRANSPORTATION Thursday, May 26th, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

More efficient forms of transportation systems must be developed in order to provide regional sustainability. Transportation provides the backbone of regional development. City-form has been largely dictated by the available modes of transportation at the time they developed. This can be seen in the compactness of older city centers where the mode of transportation was largely by foot or horse drawn carriage. The placement of cities along navigatable waterways such as Louisville was driven by transportation. With the advent of the automobile we see the subsequent development of suburbs spreading farther from the core of urban activity. In order to return to a more sustainable region, transportation modes such as bicycling, rail and bus systems must be developed. Join us on May 26th to hear what our region is doing to develop these modes of transportation. GUEST SPEAKERS:

Barry Barker - Executive Director the Transit Authority of River City.

Dirk Gowin - Executive Administrator of Metro Louisville Bike Louisville

FORUM 8: BALANCED GROWTH Thursday, February 5th, 6:00 pm

Glassworks, 815 West Market, Louisville, KY Current development patterns -- dominated by what some call "sprawl" -- are no longer in the long-term interest of our cities. Unsustainable land use patterns compromise existing communities, our quality of life, and important resources for our livelihood. A response to this has been the practice of smart growth, which is built around the idea that if we can shift toward a more balanced development pattern, it will have tremendous environmental and economic benefits. Join us on February 5th as we hear planning experts from Nashville and the Atlanta area share their experience with how they are preparing for the sustainable development of their communities' future. GUEST SPEAKERS:

ADAPTIVE REUSE Thursday, December 4th, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

The greenest building is the one already built. As old buildings outlive their original purpose, the lifecycle costs, embodied energy, sustainable advantages of waste reduction, and the benefit of maintaining historic architecture in many cases make it more efficient and environmentally responsible to redevelop them. Adaptive reuse reduces sprawl, preserves neighborhood character and makes our city more sustainable. Join us on December 4th for an evening of discussion on the benefits of reusing our existing buildings and how we can make our community more sustainable. GUEST SPEAKERS:

FORUM 6:

2008 LOUISVILLE SOLAR TOUR Saturday, October 4th, 10:00 am

Urban Design Studio, 507 South Third St, Louisville, KY

Whether you are interested in reducing your carbon footprint, utility costs, help move our country towards energy independence, or just curious to know what people in our community are doing related to solar energy, you won't

want to miss this event. We will have a wide variety of short speaker presentations from architects, developers, home owners, and others involved in utilizing solar energy. You will have an opportunity to speak with local leaders in solar energy.

This event is part of a National Solar Tour organized by the American Solar Energy Society (ASES). Following the morning presentations, attendees will have the opportunity to take tours of local sites utilizing solar power from homes and multi-unit residential, to school buildings and other commercial uses.

GUEST SPEAKERS:

Presentations will be approximately 10 minutes each with time to speak to the presenters at noon. Intro: Claude Stephens, Bernheim Forest Visitor's Center, LEED*

1. Christopher Whelan of EON (LG&E)
2. Steve Sizemore & Charlie Weber, Metro Louisville Planning Sustainability Initiatives
3. Dr. Russ Barnett, Speed School: UofL Campus Solar Initiatives
4. Lori Beck, Ohio Valley Creative Energy Arts Campus

Vital for life on our planet, fresh water supplies in many parts of the world are under increased stress. Shifting weather patterns, population growth, poor environmental regulations, pharmaceuticals, aging infrastructure, and waste among other factors have led to increases in contamination and reduction in our supply of fresh water. Louisville's own combined sewer system is in trouble due to overflow issues leading to unacceptable levels of wastewater discharge. Join us August 12th for an evening of discussion on water and learn what you can do to help make our city, region, and world more sustainable. GUEST SPEAKERS:

Bud Schardein, Executive Director, Metropolitan Sewer District (MSD)
Judy Petersen, Executive Director, Kentucky Waterways Alliance Gill Holland, Producer, The Group Entertainment

FORUM 2: SUSTAINABLE HOME

Thursday, December 6, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

Whether you are looking to make your existing home more sustainable, building an addition, or designing a new home, the information you will gain from this forum will be invaluable. Learn how to make your home more energy efficient and environmentally friendly with up to date information about home improvements, energy, materials, appliances and more from professionals. Please join us on December 6th for an in-depth seminar on home efficiency and environmentally sound practices. The Energy Pros will take you through the house from foundation to the roof.

FORUM 1: GARDENING & LANDSCAPING

Thursday, November 1, 6:00 pm

Glassworks, 815 West Market, Louisville, KY

Through the use of native plantings, rain barrels and other tools and techniques we can conserve resources while enhancing our natural surroundings. Please join us for an evening of discussion focused on how homeowners, business owners and related professionals can create healthy and resilient landscaped spaces that are beautiful, environmentally responsive, functional, manageable and enduring.
